

## DStv Online | Job Description | Java Developer

Job Opening For Intermediate Java Developer | DStv Online

### Job Opening: Java Developer

If you're a Java Developer with a passion for technology, innovation and pushing the boundaries, DStv Online has the perfect opportunity for you. This is a development position that requires you to be involved in the development, maintenance and support of various middle tier and back end implementations. You'll need to have sound knowledge and capabilities within middleware and back end development, have a strong background in web and front end technologies, have a desire to learn and be keen to experiment. Think you've got what it takes? Read on to find out more about joining our team at DStv Online.

### Our Team

We are a **group of digital gurus** who devote all our time and energy to technology. We are **100% passionate about what we do** and there isn't a moment's hesitation when asked about our favourite pastimes: anything that's digitally based!

Does this sound like your home away from home? If it does, we'd be glad to welcome you as a part of the team, provided you fit the bill.

### This Is What You'll Be Getting Up To

You'll need to be totally proactive about carrying out your roles and responsibilities, but you'll also have plenty of guidance from your Technical Team Lead.

This is **what we need you to do**:

- Design and prototype interactive applications based on business requirements
- Design and maintain technical system requirements based on business needs
- Develop interactive applications based on approved specifications and prototypes
- Develop, test, debug and maintain application code
- Develop, update and maintain technical documentation
- Integrate existing as well as new applications onto Online, Mobile, Broadband & Broadcast platforms

Sound like a lot? We know that you can handle it because **you eat, sleep and dream development**, right?

### Do You Check All The Boxes?

So you've come this far; this is the final step. **Do you fit within these criteria?**

- You have a University Degree in Computer Studies or suitable equivalent
- You have a minimum of 4 years' experience in application, middleware and Internet development
- You have exceptional knowledge of Java, JSON, XML, XSL
- Solid experience with frameworks such as Spring
- Tomcat, Apache
- CI / CD knowledge.
- Test Driven Development (TDD) and/or Behavior Driven Development (BDD)
- RDBMS experience (MySQL, MSSQL)

- Solid understanding of Agile methodologies (SCRUM, Kanban)
- Logical, analytical, problem solver
- Eager to learn new technologies and excited by change

Having some of the following under your belt would be highly advantageous:

- BPM, ESB and rules engine experience
- NoSQL knowledge would be a definite advantage (MongoDB, Neo4J)
- Mobile / Tablet development experience (Android, iOS)
- Experience with the likes of Jenkins, Selenium, Maven, JBehave, Puppet

In addition to all of the above, we **need to make sure that you have the personality that will fit in** with our team

- You're a results-oriented type of professional with strong verbal and written communication skills
- You're also able to maintain solid relationships with vendors and customers
- You have the ability to conduct effective research
- As well as the ability to analyse, troubleshoot, and modify highly complex software products independently
- Teamwork is something that you live by, but you can work efficiently on your own if you have to
- You consume deadlines with your morning coffee
- You have outstanding logic in any situation
- You have a great laugh! And you enjoy laughing... even at yourself

If you've made it to the end and this still **sounds like the ideal job for you**, then you **need to apply right now!**
